

PROJECT WISCC

Wisconsin Whole School, Whole Community, Whole Child

In July 2023, the Student Services/Prevention and Wellness Team was selected as one of 20 recipients for a CDC-funded, 5-year cooperative agreement.

This initiative aims to promote health, equity, and academic success for students in underserved communities affected by chronic disease and related risks through school-based interventions that support student well-being and achievement.

Through focused initiatives with a primary local education agency (LEA) and statewide programs, the goals are to...

- **Improve School Nutrition:** Enhance the quality and accessibility of nutritious meals in schools.
- **Increase Physical Activity:** Implement Comprehensive School Physical Activity Programs, including [Wisconsin's Active Schools Core 4+](#), to encourage active lifestyles among students.
- **Manage Chronic Disease:** Support schools in effectively managing chronic health conditions to improve student health outcomes.

As part of Project WI-WSCC, schools are encouraged to complete School Health Index Modules 1-4 and apply for the [Healthy Schools Academy](#).
